

FlowForge Product Brief

What is FlowForge?

FlowForge is a node-based workflow builder for AI-generated media.

Users connect nodes on a visual canvas to build media pipelines.

Every node calls a cloud API - no local model ever runs on device.

Key Features

1. Visual node canvas with typed ports: text, image, video, audio.
2. An AI agent that generates and edits workflows from a text prompt.
3. Built-in nodes for OpenRouter LLMs, fal.ai media models, Vbee TTS.

Target Users

Content creators producing social media posts and short videos.

Marketing teams that need fast draft copy, images, and voiceover.

Indie developers who want an AI pipeline without writing glue code.
